UTAH DIVISION OF OIL, GAS & MINING

MONTHLY OIL AND GAS
PRODUCTION REPORT

NOTE

In an effort to provide the monthly production report to a greater audience, it was placed several months ago on the division's internet web site at http://dogm.nr.state.ut.us. Due to the success of this effort, and in order to reduce taxpayer expense, the report will no longer be printed in hardcopy version. The December 1999 report was the final edition in paper form. We hope this will improve service to the general public and apologize for any inconvenience it may cause.

● The January 1999 Production Report represented the first such report generated by the division's newly revised Oil and Gas Database System. This updated system has been developed to be Y2K compliant, as well as to provide a more flexible and efficient PC-based client-server network.

● Substantial effort is made to create an accurate report, however errors may occasionally occur. Discovery of any discrepancies may be reported to Mr. Don Staley at the Division of Oil, Gas and Mining (801-538-5275).

● This report consists of four sections:
    Production by Well
    Production by County
    Production by Field
    Production by Operator

● For wells currently producing from multiple zones where the volumes are measured separately for each zone, and for active wells that have produced in the past from additional zones that are no longer active, each zone is listed separately in the Production by Well section. Each zone is included as a separate well in the "Active Wells" totals of each summary. Each inactive zone is labeled "Abandoned Zone."

● The companies shown in these reports are the well operators that submitted production data to the division for the month. In a few cases, the companies shown are not the "official" operators as shown on the division's records. This situation occurs when operator changes are in progress and have not yet been formally approved.

● Production data as contained in these reports, is adjusted from time to time due to corrections to previous reports and amendments submitted by operators.

This report is available on our Web site at no cost:
